

JOB POSTING

Date of Posting: July 18, 2008
Posting Number: NY71808OSPSF
Position: OSP Specialist –Field (5 positions)
Status: Exempt
Location: New York City, NY (Adesta Broadband Networks)
Position Reports To: Project Manager

The incumbent maintains control of outside plant (OSP) activities surrounding a given work site, takes and maintains accurate field notes, and makes recommendations in support of the project schedule.

Essential Duties and Functions:

- Safely performs work in accordance with industry standards, the contract's scope of work, the design engineer's instructions, and specifications.
- Accurately interprets underground, buried and aerial telecom facilities in records, on maps and in the field in order to prepare engineering field notes in sufficient clarity and detail to facilitate conversion to CADD programs.
- Makes recommendations for changes in running line or construction methodologies due to knowledge of or experience in environmental conditions, construction access by crews, or congestion of utilities.
- Understands and actively participates in the engineering, permitting and construction processes in order to support the requirements of the project contract
- Determines correct procedures for OSP fiber optic cable splicing, termination, testing, and documentation.
- Other duties as assigned by supervision.
- Must be able to operate a measuring wheel, pull finder, and height stick

Qualifications:

One year of OSP telecom engineering or construction experience, or BS/BA degree in construction management or engineering, or an acceptable equivalency in education and experience. A degree in any engineering discipline acceptable, but civil, mechanical or electrical preferred. Desirable work experience includes field engineering lead responsibility/project charge responsibility. Supervisory experience a plus. If required by job responsibilities, incumbent must possess a valid driver's license.
